Gear Motors

Technical Information

Sauer-Sundstrand Gear Pump and Motor Features

- Worldwide sales and service capabilities from the industry leader is part of the package for every Sauer-Sundstrand gear product customer.
- Proven reliability with over 45 years of experience in gear product design for mobile and industrial applications.
- System pressures to 4000 psi (276 bar) and speeds to 10,000 rpm allow high performance in system design.
- Pressure balanced design for high efficiency and long life.
- Low cost design and manufacturing for the requirements of fixed displacement systems.
- Variety of flexible installation options available:
 - Convenient side or rear porting options
 - Auxiliary through drive SAE mounting pads
 - Integral relief valve, priority flow control, and priority flow divider covers
 - High temperature viton seals
 - Metric and European flanges, shafts and ports
 - Multiple pump configurations (refer to the Quick Reference chart below)

A Complete Family of Sauer-Sundstrand Gear Pumps and Motors

Quick Reference - Displacement/Model

General Gear Product Specifications

Information in the following pages will help determine which Sauer-Sundstrand components are most appropriate for your application.

General Description

SAUER-SUNDSTRAND High performance gear motors are fixed displacement motors. They consist of motor housing, drive gear, driven gear, DU bushings, motor cover and flange, shaft seal ring and the outer and inner seals, as shown in Figure 1. The pressure balanced design provides high efficiency for the entire series of motors.

Features

Economical through:

- high output torque
- wide speed range
- high efficiency
- long life

Method of Operation

When a motor is driven by an external flow of oil under pressure, the empty tooth chambers are filled with hydraulic fluid. The hydraulic fluid is transported to the low pressure side via the path of the tooth chambers of the rotating gears. The high

and low pressure areas of the motor are separated from each other: radially by the intake path of the gears in the motor housing, and axially by the DU Bushings.

Order Example: SNM2 / 25 SC 06

Single gear pump SNM 2,
displacement = 1.54 in³ (25.2 cm³), mounting
flange and drive shaft: splined shaft, SAE "A" 2 bolt
flange.

Special Design Option Prefixes:

SNM2F = Check valve/Throttle orifice integral to cover.

SNM2D = Bi-directional check valve for bearing blocks, allows case drain to be plugged. Outlet pressure can not exceed 100 psi (6.8 bar)

Note: Please contact Sauer-Sundstrand for 9.5 and 12 cc models.

Technical Parameters

Circuit Diagram and Nomenclature

Gear motor

Figure 2

Design

Gear motor

Type of Mounting

Two bolt SAE "A", four bolt DIN, and Bosch mount.

Porting Options

SAE O-ring, DIN Flange, Bosch Flange, and B.S.P Threaded.

Direction of Rotation

Clockwise or counterclockwise.

Speed Range

See tables on page 6.

Weight

Available upon request.

Installation Position

Optional

Flow Direction

Flow direction changes with the direction of rotation.

Hydraulic Parameters

System Pressure, Case Drain / Output p_2

Maximum output pressure = 100 psi (6.8 bar).

Hydraulic Parameters, continued

System Pressure Range, Input p_1

Maximum pressure = 3600 psi (250 bar), see page 6.

Hydraulic Fluid

Hydraulic fluid, refer to SAUER-SUNDSTRAND Bulletin BLN-9887 or Publication SDF (Id.No. 697581).

Temperature Range

T min = - 4°F (- 20 °C), intermittent, cold start.
T max = 180°F (+ 80 °C), maximum, continuous.

Fluid Viscosity Limits

n min = 59 SUS (10 mm²/s)
n max = 4900 SUS (1000 mm²/s) intermittent cold start
Recommended viscosity range: 98-233 SUS (20-50 mm²/s).

Filtration

Required cleanliness level:ISO Code 18/13 or better.
Refer to SAUER-SUNDSTRAND Bulletin BLN-9887 or Publication SDF (Id.No. 697581).

Displacement Per Revolution

See tables 1 & 2 on page 6.

Output Power

See performance curves on pages 10 - 13.

Input Flow

See performance curves on pages 10 - 13.

Technical Application Regulations, Recommendations and Explanation

Shaft Load

The drive must not impose axial or radial loads on the pump shaft. When using a coupling make sure that there are no axial or radial loads. When a belt drive, a gear drive or a chain drive has to be used, it may necessary to install a load adapter such as the outrigger option shown on pages 20 and 21. Contact Sauer-Sundstrand for application assistance.

Determination of Nominal Motor Size, SI and English System

$$\text{Input flow } Q_e = \frac{Vg \cdot n}{1000 \cdot \eta_v} \quad \text{l/min}$$

$$\text{Output torque } M_e = \frac{Vg \cdot \Delta p \cdot \eta_{mh}}{20 \cdot \pi} \quad \text{Nm}$$

$$\text{Output Power } P = \frac{M_e \cdot n}{9550} = \frac{Q_e \cdot \Delta p \cdot \eta_t}{600} \quad \text{kW}$$

$$\text{Input flow } Q_e = \frac{Vg \cdot n}{231 \cdot \eta_v} \quad \text{gal/min}$$

$$\text{Output torque } M_e = \frac{Vg \cdot \Delta p \cdot \eta_{mh}}{2 \cdot \pi} \quad \text{in} \cdot \text{lb}$$

$$\text{Output Power } P = \frac{M_e \cdot n}{9550} = \frac{Q_e \cdot \Delta p \cdot \eta_t}{1714} \quad \text{HP}$$

Vg = Displacement per revolution in cm^3

p_{HD} = High pressure, in bar

p_{ND} = Low pressure, in bar

Δp = $p_{HD} - p_{ND}$ bar (System pressure)

n = Speed rpm (min^{-1})

η_v = Volumetric efficiency, (%)

η_{mh} = Mechanical - hydraulic efficiency, (%)

η_t = Overall efficiency, (%)

| SNM2 / 25 | 25.2 • 1.54 | 160 • 2300 | 61 | 125.5 | | |

Max. allowable torque of input shaft, Configurations:
CI 06 = 90 Nm (790 in•lb)
SC 06 = 100 Nm (880 in•lb)

Outrigger Assembly

For SN Series Pumps and Motors

Loading

Outrigger assemblies are recommended for use when heavy radial loads pose a problem for shaft loads on standard pumps and motors. Maximum radial load is 360 lbs at 1.5" from the mounting flange surface. Maximum axial load is 200 lbs. The maximum continuous torque rating is 620 in lbs (70 Nm), or the same as the FR03 pumps and motors.

Pressure

Maximum allowable case drain pressure or return line (if case drain not utilized) is 300 psi continuous and 400 psi peak. Pumps and motors using the outrigger and operating above 2500 rpm must use the outrigger case drain port. See page 19 for reference and port locations. The SNM2 motor must be used for these applications.

Applications

The following bi-directional motor codes will mount directly to the outrigger:

| | |
|----------------|----------------|
| SEM2/...FR03 | SNM2/...FR03 |
| SEM2/...FR03 E | SNM2/...FR03 E |

Hydraulic Power Systems

SAUER-SUNDSTRAND Hydraulic Power Systems - Market Leaders Worldwide

SAUER-SUNDSTRAND is a world leader in the design and manufacture of Hydraulic Power Systems. Research and development resources in both North America and Europe enable SAUER-SUNDSTRAND to offer a wide range of design solutions utilizing hydraulic power system technology.

SAUER-SUNDSTRAND specializes in integrating a full range of system components to provide vehicle designers with the most advanced total-design system.

SAUER-SUNDSTRAND is Your World Source for Controlled Hydraulic Power Systems.
